

SINA SASANPUR

Iran citizen

Residence in Istanbul, Küçükçekmece

Full-Stack web developer with 3 years of experience, skilled in both frontend and backend development. Mainly focused on React and .NET technologies.

EDUCATION

2018-2021 ————— **PNU North Branch**, Computer Engineering (left in 3rd year)
2022-2024 ————— **Uludağ University**, Associate Degree in Computer Programming

EXPERIENCE

Operations (Intern), **Defne Telecommunication Inc.** ————— 2024 (1 month)
Contributor, **University's AI Club** ————— 2023 (2 months)
Front-end developer, **Timcheh (retail)** ————— 2020 (6 months)
IT Support (Intern), **Sharh Newspaper HQ** ————— 2018 (2 months)

PROJECTS

[Portfolio](#) + [Blog](#) ————— React, Next.JS, Framer Motion + MongoDB, Docker
[IMGapp](#) ————— React, Next.JS, Framer Motion + .NET Core 9, SQLite, Redis
[FileUp](#) ————— JS + .NET Core 8
[Faal Akademi](#) ————— Next.JS + Supabase on Cloudflare Workers + PayTR

WEB SKILLS

Frontend: ————— ReactJS, NextJS, Tailwind
Backend: ————— .NET Core
Database: ————— MSSQL, SQLite, Redis, MongoDB
Server: ————— Linux, Docker
Methodologies: ————— RESTful APIs, CI/CD, SSR

OTHER SKILLS

TypeScript, Git, Agile, GitHub Actions, Nginx, Virtual Box, Python, regex, Tableau

FOREIGN LANGUAGES

Persian: ————— Native
English: ————— Speaking: Advanced Writing: Advanced Reading: Advanced
Turkish: ————— Speaking: Good Writing: Good Reading: Advanced
German: ————— Speaking: Intermediate Writing: Intermediate Reading: Good

More on EXPERIENCE:

Operations (Intern), **Defne Telecommunication Inc.**

Spent 30 working days. Learned about VoIP. I have got the chance to observe bigger databases with advanced SQL queries for managing the data. Learned Linux basics and fundamentals which inspired me to get my own server and dive deeper. Learned Docker and containerization.

Contributor, **University's AI Club**

The team I was in was working on a text recognition application for CVs, which categorizes information in the file. I had the task of visualizing the recognized texts.

Worked in agile environment where we had to attend 2 meetings per week.

Front-end developer, **Timcheh (retail)**

A company like trendyol where stores can sell their devices or productions.

At this 100-200 people company, I employed Bootstrap, Next.js, and RESTful APIs to craft a responsive and intuitive user interface. Left for immigration purposes.

IT Support (Intern), **Shargh Newspaper HQ**

Our duty was monitoring server health, troubleshooting technical issues, providing prompt IT solutions and solving computer problems that happen to journalists.

I also got access to network room where all the network devices are stored and got familiar with those devices.

More on PROJECTS:

[Portfolio](#) + [Blog](#) — Portfolio for showcasing my skills. The design is inspired by x.ai web design. Also, my blog posting part, separate logic but hosted same framework. I use NextJS's built in router. I use MongoDB as a scalable database to store my blog posts. I also bring it up using Docker containerization

[IMGapp](#) — Its purpose is to act like a gallery. There are a few features like renaming, reformatting and removing the image's background. I use my VPS storage to store image files, SQLite to store user data, and Redis for the "quick demo" feature which provides the visitor to open a gallery with some default images for a limited time, just to test the webapp.

Backend and Frontend are separated and communicate through mini-APIs. Frontend was designed using NextJS framework, tailwind, and FramerMotion. .NET is used for handling features in backend.

[FileUp](#) — A place for uploading files, whether through direct upload in website's UI or a request using curl. It uses a dictionary for scheduling the deletion of expired files and stores it in Redis. This personal project has the purpose of serving my IMG app project and future projects.

* All above projects are hosted on my VPS through reverse proxy using Nginx, protected by Cloudflare.

[Faal Akademi](#) — Architected a full-stack Next.js and Supabase e-learning platform featuring secure role-based access, automated PostgreSQL triggers (RLS), PayTR payment integration, and a responsive admin dashboard for complete student and course management.
